Corporate description

Glatt Air Techniques (GAT) is a leading supplier of solids process and material handling technologies for pharmaceutical manufacturing. GAT offers a full array of solids processing equipment including fluid bed processors, high-shear granulators, pan coaters, product lifting and discharging devices, automated process control systems, sieves-mills, bins, bin blenders, and complete systems integration for material handling and controls. GAT provides processing systems for total product containment and fully automated CIP technology for eliminating operator and environmental exposure.

Glatt Air Techniques is a member of the International Glatt Group of companies, founded in 1954. As a global technology provider, the Glatt Group maintains sales, engineering support, and research operations in the world's major industrial markets.

Technical services

GAT's Engineering Services Division, Ramsey Design Group, offers a full range of engineering services, facility design, construction management, automation, and validation

services. Ramsey Design's services include

- facilities engineering
- project and construction management
- automation integration
- process stimulation
- validation services
- plant optimization
- 21 CFR Plant 11 consultation and remediation services.

Facilities

Glatt has locations in Broughton Astley, United Kingdom; Copenhagen, Denmark; Dijon, France; Osaka, Japan; Shanghai, China; Pratteln, Switzerland; and Binzen, Dresden, and Weimar, Germany.

Major products

GAT's Equipment division includes sales, technical service, spare parts, and engineering support for the complete line of process equipment and material handling technology manufactured by the Glatt Group. Major products include

- fluid-bed systems
- high-shear granulators
- tablet-coating systems
- conical mills
- material handling and containment systems
- solution delivery and WIP systems
- contract maintenance and calibration
- operator and maintenance training.

Markets served

Strategically located in Ramsey, New Jersey, GAT was founded in 1973 as the sales and service arm for Glatt Group responsible for the US, Canada, and Puerto Rico markets. Today, GAT maintains an 86,000-ft² facility incorporating FDA-registered CGMP process development laboratories and full-scale contract manufacturing facility with a staff of more than 150 in three divisions: Equipment; Engineering Services (Ramsey Design Group); and Technology and Consulting Services (Glatt Contract Pharmaceutical Services).
