

## PROCESS & PLANT ENGINEERING

---

**Solutions.**  
**For your specific requirements.**

## **ONE-OF-A-KIND TECHNOLOGICAL EXPERTISE**

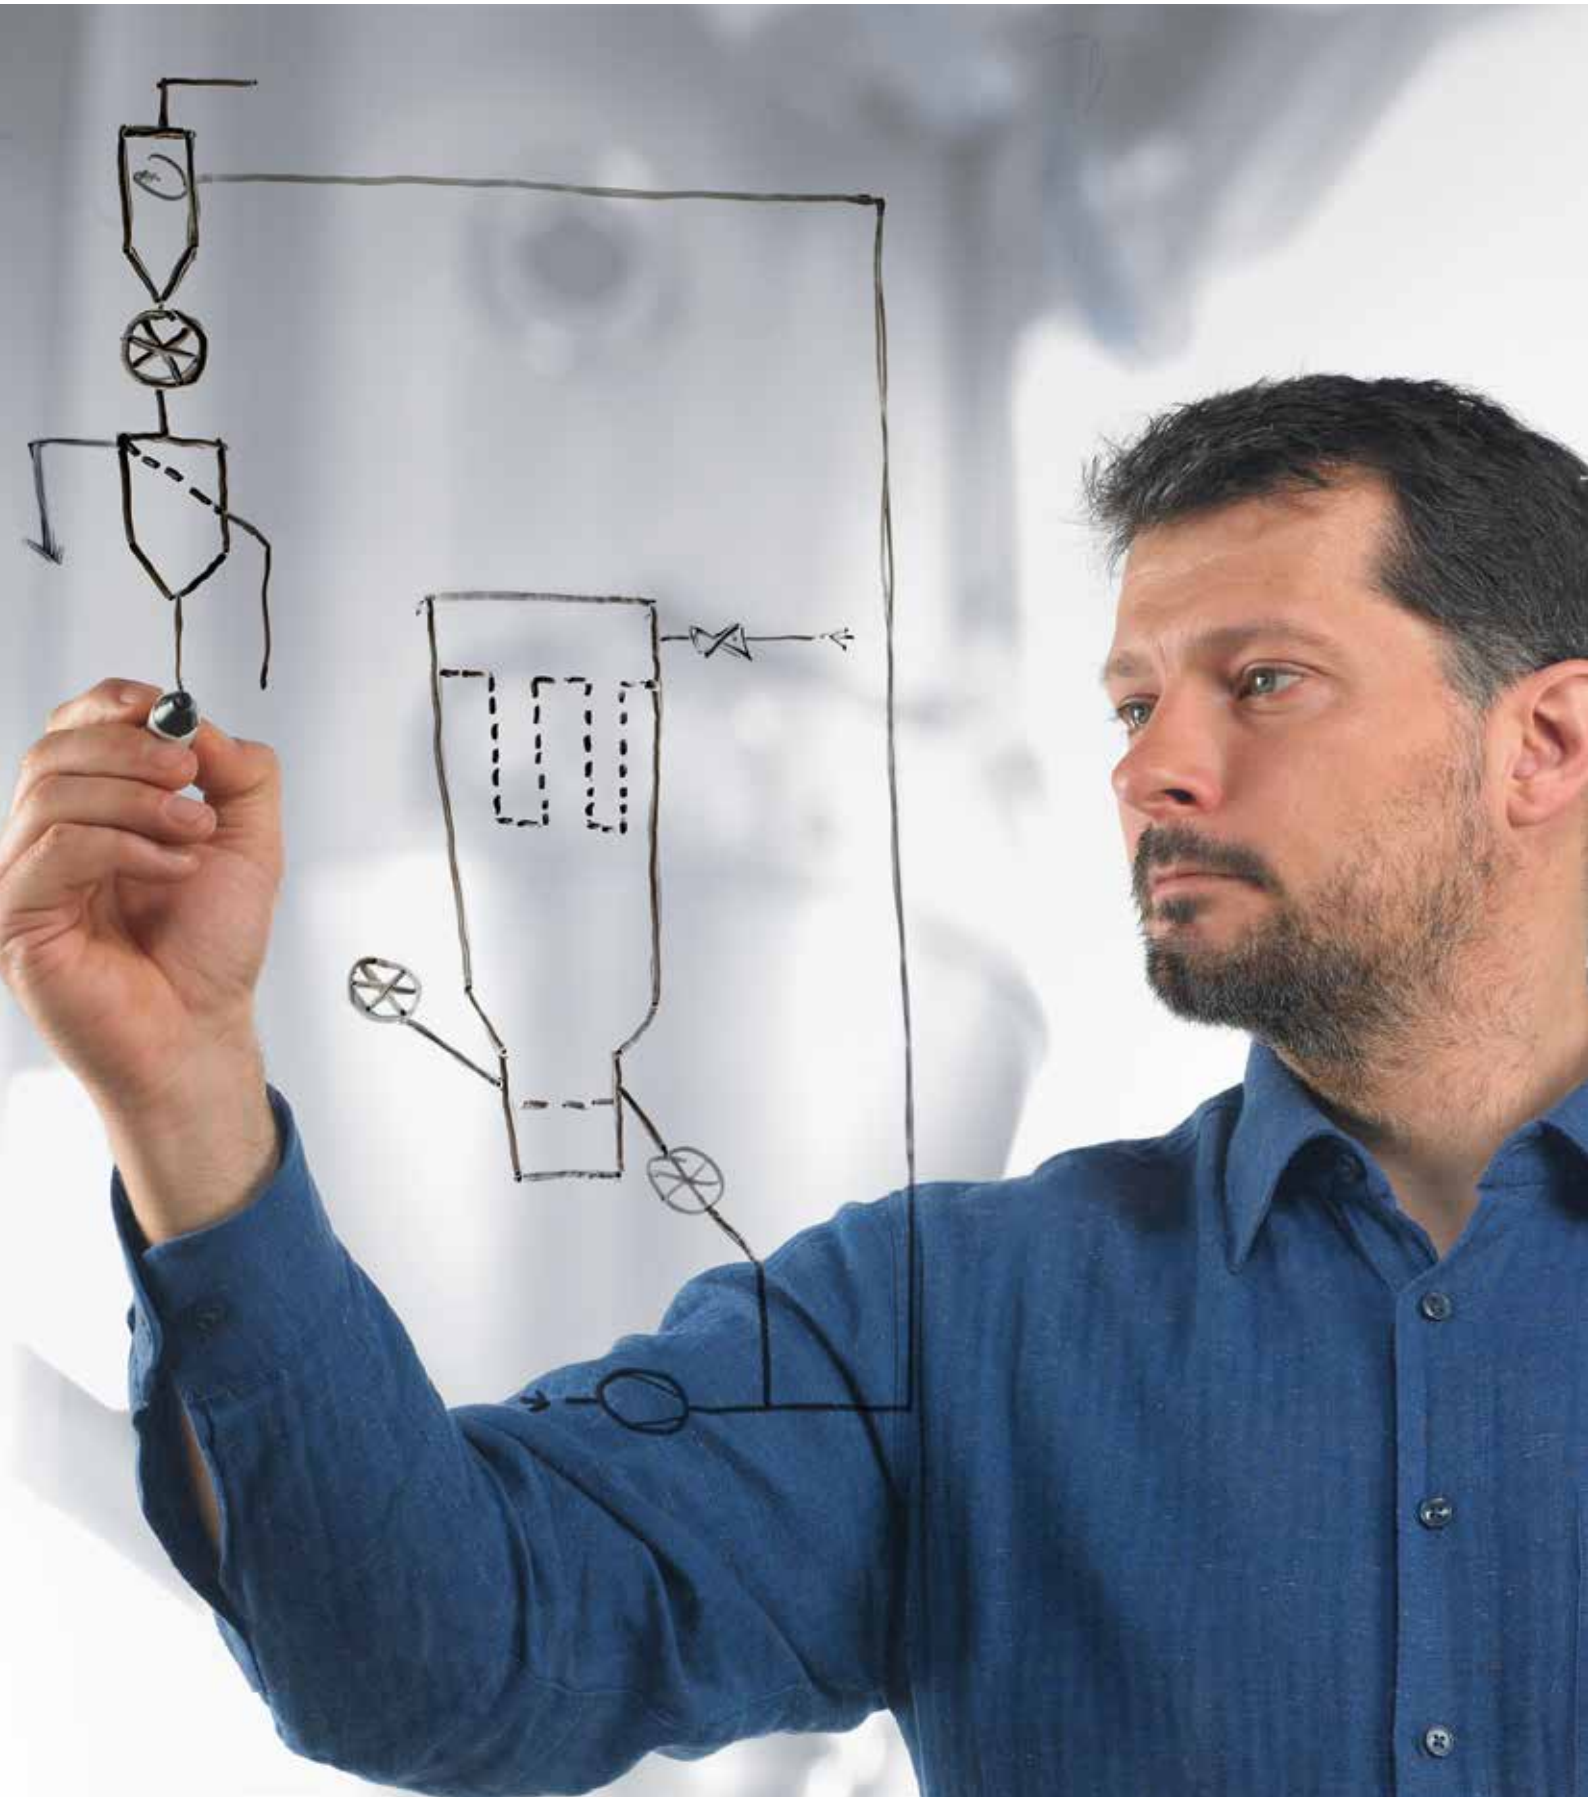

---

The specialty of Glatt Process & Plant Engineering is the enhancement, upgrading, modernization and new construction of industrial plants. In addition to our long tradition as a manufacturer of custom-engineered equipment, we also have long-standing experience in the planning, development and implementation of industrial production facilities.

We bundle these competencies together into one unique service concept: Solution-based consulting – technology transfer straight from a market leader – detailed professional execution. Always adapted to fit your production process. Intelligent. Proven. Optimized.

Solutions for your specific requirements. That is our special know-how.

**Solutions. Customized for you.**

## **AN INTEGRATED APPROACH TO PLANNING**

---

Whether you are planning on converting, upgrading or expanding your production plant – we will work with you from the initial concept all the way to the hand-off to production. Our portfolio ranges from the conceptual technical design to full project management. You benefit from engineering solutions that come from a single source. Always with a view of the big picture. Worldwide.

Our comprehensive and systematic planning ensures right from the start that the maximum potential for success is achieved. Our experts use creativity and painstaking attention to detail when developing the optimum concept for your technological process. Consistent and practical.

No matter how extensive your project is – you decide which services you would like to delegate to us as your partner: Utilizing our modular designs, we can work on specified project phases or act as the overall planner or general contractor for the entire project. It is your choice.

Solutions, customized for you. That is our unique concept.

**Solutions. For your application.**

## LONG-STANDING EXPERTISE

---

Our technological expertise covers a broad spectrum across several industrial sectors: from pharmaceutical technology and biotechnology to the cosmetics, food and feed industries, to ceramics, chemistry and fine chemical technology. No matter how simple or complex a task may be: We develop solutions for the future. For individual processes and systems. Or full production plants. Precise. Efficient. Sustainable.

Regardless of which of the above sectors fits your situation – there are three things you can always count on when you enter into a partnership with us: We are oriented towards the demands of your market as well as the requirements of your production processes. We have full knowledge of all the appropriate market-related requirements and regulations and offer comprehensive GMP and environmental compliance. All to facilitate your head start in the markets of tomorrow.

Solutions for your sector. That is our benchmark.

**Solutions. For your future.**

## FOCUSING ON YOUR GOALS

---

Our main focus is you and your specific needs. We consider ourselves to not only be problem solvers for specific technology requirements; we will also support you as a reliable partner when it comes to the successful execution of your overall project.

**With our own expertise.** You benefit from the know-how transfer of tried and tested process technologies from the Glatt group of companies and market-leading technology partners. Due to the fact that we, in our role as planners, are not bound to any manufacturers, we are able to ensure neutrality when it comes to the technological solutions and the selection of the equipment.

**With the highest quality standard.** In keeping with our established understanding of technology, we emphasize highquality, reliability and precision in the execution in all project phases. This includes extensive documentation.

**With flexible collaboration.** Our modular service concept allows us to optimally adapt to your project structure. As a medium-sized company, we can guarantee short communication channels and are able to implement your requests quickly and flexibly.

**For your investment security and profitability:** Optimized processes allow you to shorten the time-to-market for your products, reduce your production costs and tap into additional resources for a more economical production.

Solutions for your future. That is our mission.

**Solutions.**

**For you, entirely from a single source.**

## COMPREHENSIVE. INDIVIDUAL. INNOVATIVE.

---

For all services that fall under the name Glatt, one thing always applies: You will receive one-of-a-kind, time proven and robust integrated solutions from a single source. Interacting and collaborating with our additional three areas of expertise, Process & Plant Engineering provides a high-performing, reliable partner and trustworthy at your side.

Glatt offers you a comprehensive range of services, innovative technologies and individualized attention. You get the assurance from the start that we will accompany through the entire development of your process. From the design and initial concept to the complete and reliable solution.

Solutions for your success. That is our mission.
